Subject index

Acidic fibroblast
analogue 541
β_2-Adrenoreceptor
model 59
Affinity peptide
streptavidin binding 109
Aldose
ketose isomerization 479
Algorithm
ligand placement, molecular modelling 723
Metropolis Monte Carlo scheme 793
side chain placement, fuzzy-end elimination theorem 717
Aliphatic hydroxylation
cytochrome P-450$_{cam}$, site-directed mutagenesis 207
All-helical proteins
secondary structure prediction using logic programming 831
ALSCRIPT
sequence alignment 37
AMBER
molecular dynamics turn prediction, α_1-purothionin 837
Anti-HIV vaccine
predetermined tertiary structure, four-helix bundle structural motif 997
Anti-phosphotyrosine antibody
molecular modelling, high affinity interactions 661
α-Antichymotrypsin
serpin, homology modelling 701
Antiparallel β-sheets
weak points in 367
Arginine side chains
atomic environments 247
Aspartate transcarbamoylase
Escherichia coli, overproduction 123
Aspergillus awamori
glucoamylase, catalytic and pH properties, cassette mutagenesis 939
glucoamylase, site-directed mutagenesis 75
Atomic environments
arginine side chains 247
Atrazine
monoclonal antibody Fab fragment, cloning, sequencing and expression 981
Autodigestion
Bacillus subtilis neutral protease, introduction of disulphide bonds 521
Avian ovomucoid domains
overexpression in *Escherichia coli* 221

B2 subsite
bovine pancreatic ribonuclease A, ribonuclease A 901
Bacillus licheniformis
E166A mutant, β-lactamase structure, kinetics 11
Bacillus subtilis
β-1,4-endoglucanase, pH activity profile 921
neutral protease, introduction of disulphide bonds 521
($\beta\alpha$)-Barrel
Escherichia coli triosephosphate isomerase ($\beta\alpha$)-unit 8 893
β-Barrel
β-sandwich protein 461
Binding sites
metal, prediction, characterization 29

Calcium binding
structural motif, EF-hand peptide, free energy simulation 585
Calcium binding site
thermostability, human lysozyme 643
CAMP-dependent protein kinase subunit
Escherichia coli expression of 771
Carboxypeptidase A
inhibitor, homology with trypsin inhibitor 675
Carboxypeptidase Y
mutagenesis 409
β-Casein
bovine, expression in *Escherichia coli*, chymosin cleavage site 763
Cassette mutagenesis
Aspergillus awamori glucoamylase, catalytic and pH properties 939
recursive ensemble mutagenesis 327
CD2 T lymphocyte antigen
site-directed mutagenesis of lymphocyte antigen 965
CelC and CelD
endoglucanases, expressed in *Clostridium thermocellum* 947
Cell-envelope proteinase
Lactococcus lactis homology modelling with serine proteinase 927
Chimeric toxins
epidermal growth factor, *Pseudomonas* exotoxin A 433
Chymosin cleavage site
bovine β-casein 763
Chymotrypsin complex
homology modelling 701
Clostridium thermocellum
endoglucanases, CelC and CelD, fusion protein 947
Coat protein
RNA phage *fr*, mutagenesis analysis 883
Coiled-coil proteins
symmetric, leucine zipper proteins, Jun, GCN4, structure 557
Comparative modelling
tertiary structure 501
Computer modelling
comparison of algorithms 377
computer vision based comparison of proteins 279
disulphide bond in α-conotoxin GI, endothelin I, using RANMOD, MODIP 873
enzyme catalysed reaction mechanisms 133
homology modelling, ALSCRIPT sequence alignment 37
homology modelling, α-antichymotrypsin, chymotrypsin complex 701
homology modelling, mix 'n' match secondary structure prediction 683
homology modelling, pseudoenergy profiles 811
homology modelling using structural information 821
idealized folds, multiple sequence data 593
molecular dynamics turn prediction, AMBER XPLOR, α_1-purothionin 837
molecular model, influenza virus M_2 protein, ion channel 65
molecular modelling, ligand placement algorithm 723
molecular modelling analysis, α-tropomyosin 51
molecular modelling high affinity interactions, anti-phosphotyrosine antibody 661
recursive ensemble mutagenesis 327
Rhizomucor miehei lipase activation 855
SBASE domain library 391
secondary structure prediction, homology modelling 261
sequence alignment, designing discriminating fingerprints 167
sequence alignment, dynamic programming algorithm 373
tertiary structure 501
α-Conotoxin GI
disulphide bond computer modelling using RANMOD, MODIP 873
Contact frequency
in protein sequence 267
Contact maps
Monte Carlo simulation, regularities in interaction patterns, globular proteins 801
Corticotrophin releasing factor
^{1}H NMR structure 149
Coxsackievirus B3
3C proteinase models 189
Crystallization
glycosylation of T cell glycoprotein CD2 229
Cutinase
Fusarium solani pisi, site-directed mutagenesis 157
Cytochrome b_5
Escherichia coli expression of, thermostability, solution structure 953
Cytochrome P-450$_{cam}$
site-directed mutagenesis and aliphatic hydroxylation 207
thiocamphor substrate mobility 359

DAB$_{389}$-IL-6
interleukin-6 receptor fusion toxin 305

Dienelactone hydrolase
Cys-His-Asp triad 575
Dihydrofolate reductase
site-directed mutagenesis 81
Dihydrolipoamide acetyltransferase
Escherichia coli, pyruvate dehydrogenase complex 101
Distance constraints
protein folding, Monte Carlo method 605
Disulphide bonds
Bacillus subtilis neutral protease, introduction of 521
α-conotoxin GI, endothelin I, computer modelling using RANMOD, MODIP 873
DNA-binding
helix−turn−helix module 621
SPKK 565
DNA-binding domain
commentary 129
structure in eukaryotic gene regulatory proteins 41
DNase I
single-residue mutants, structures 349
Dynamic programming algorithm
secondary structure, sequence alignment 373

β-1,4-Endoglucanase
from *Bacillus subtilis*, pH activity profile 921
Endoglucanases
CelC and CelD expressed in *Clostridium thermocellum*, fusion protein 947
Endothelin I
disulphide bond computer modelling using RANMOD, MODIP 873
Enzyme−substrate complex
ion pairs, charge reversal mutagenesis 455
Enzyme catalysed reaction mechanisms
computer modelling 133
Epidermal growth factor
chimeric toxins with *Pseudomonas* exotoxin A 433
human, mutagenesis 651
Escherichia coli
acidic fibroblast analogue expressed in 541
aspartate transcarbamoylase overproduction 123
avian ovomucoid domains overexpression in 221
bovine β-casein overproduction 763
bovine β-1,4-galactosyltransferase expression in 779
dihydrolipoamide acetyltransferase, pyruvate dehydrogenase complex 101
expression of cAMP-dependent protein kinase subunit 771
expression of cytochrome b_5, thermostability, solution structure 953
fibrinogen binding to platelet receptor $\alpha_{IIb}\beta_3$ 745
hamster dihydroorotase domain expression in 333
lipoprotein single-chain antibody fusion protein, expression in 449
ribonuclease HI site-directed mutagenesis 85
RNA phage *fr* coat protein mutagenesis analysis 883
RNase T1 expressed in, site-directed mutagenesis, catalytic activity 739
staphylococcal protein A/immunoglobulin G class 1 expression in 441
streptavidin binding affinity peptide 109
triosephosphate isomerase (βα)-unit 8 893
Eukaryotic gene regulatory proteins
DNA-binding domain structure in 41
Exons
bovine pancreatic β-trypsin, homology modelling 615

Fab fragment
atrazine monoclonal antibody, cloning, sequencing and expression 981
Factor VIII
human, production 669
Factor X−cellulose-binding domain
fusion protein, production and properties 787
Fibrin
specific tissue-type plasminogen activator 529
Fibrinogen
binding to platelet receptor $\alpha_{IIb}\beta_3$ 745
Fibrinopeptide A
α-thrombin peptidomimetic inhibitor complex, crystal structure 471
Four-helix bundle
anti-HIV vaccine, predetermined tertiary structure 997
Free energy calculations
thermostability 289
Free energy simulation
EF-hand peptide, calcium binding 585
Fusarium solani pisi
cutinase, site-directed mutagenesis 157
Fusion protein
endoglucanases CelC and CelD expressed in *Clostridium thermocellum* 947
expression in *Escherichia coli*, lipoprotein single-chain antibody 449
factor X−cellulose-binding domain, production and properties 787
Fusion toxin
DAB_{389}-IL-6 305
Fuzzy-end elimination theorem
side chain placement algorithm, global minimum energy conformation 717

G-protein-coupled receptors
protein sequence, designing discriminating fingerprints 167
β-1,4-Galactosyltransferase
bovine, expression in, *Escherichia coli* 779
GCN4
structure 557
Gene amplification
human factor VIII production 669
Global folding
Monte Carlo method 605
Global minimum energy conformation
fuzzy-end elimination theorem, side chain placement algorithm 717
Globular proteins
regularities in interaction patterns, Monte Carlo simulation 801
Glucoamylase
Aspergillus awamori, site-directed mutagenesis 75
***N*-Glucosidase**
Escherichia coli expression of ricin A-chain 425
Glutathione *S*-transferase
P1-1, human, site-directed mutagenesis 93
Glycoprotein CD2
glycosylation crystallization of 229
Glycosylation
crystallization of T cell glycoprotein CD2 229
Gram-negative bacteria
6-phospho-β-glucosidases 913
Gram-positive bacteria
6-phospho-β-galactosidases 913
Greek key
motif, analysis 233
β-sandwich protein 461

Haemophilia
human factor VIII production 669
Hamster dihydroorotase domain
expression in *Escherichia coli* 333
Helix−turn−helix module
structural motif, DNA-binding 621
High affinity interactions
computer modelling, molecular modelling, anti-phosphotyrosine antibody 661
His4/acetate dehydrogenase
oxaloacetate decarboxylation facilitation by zinc ions bound to 907
Homology modelling
ALSCRIPT sequence alignment 37
bovine pancreatic β-trypsin exons 615
interleukin-1β protein sequence, hydrophobic profiles 865
Lactococcus lactis cell-envelope proteinase with serine proteinase 927
mix 'n' match secondary structure prediction 683
pseudoenergy profiles, structure prediction 811
secondary structure prediction 261
serpin α-antichymotrypsin, chymotrypsin complex 701
thyroid transcription factor 1 homeodomain 513
using structural information 821
Hormone−receptor complex
ion pairs, charge reversal mutagenesis 455
5-HT_{1a}
human, molecular dynamics receptor modelling 691
Human
epidermal growth factor, receptor-binding 651

factor VIII production, gene amplification 669
glutathione *S*-transferase, P1-1 93
5-HT_{1a} molecular dynamics receptor modelling 691
humanization of mouse anti-human immunoglobulin E antibody 971
immunoglobulin G class 1 expression in *Escherichia coli*, interaction with staphylococcal protein A 441
interleukin-1α, structure–function analysis, receptor 535
lysozyme, calcium binding site thermostability 643
Humanization
of mouse anti-human immunoglobulin E antibody 971
Hydrophobic profiles
interleukin-1β homology modelling 865

Immunoglobulin E antibody
humanization of mouse anti-human immunoglobulin E antibody 971
Immunoglobulin G class 1
human, interaction with staphylococcal protein A 441
Influenza virus
M_2 protein, ion channel molecular model 65
Interdomain linker
dihydrolipoamide acetyltransferase, *Escherichia coli*, pyruvate dehydrogenase complex 101
Interleukin-1α
structure–function analysis, receptor 535
Interleukin-1β
homology modelling hydrophobic profiles 865
structural determinants protein folding 711
thermodynamic and thermal stability 733
Interleukin-6 receptor
fusion toxin DAB_{389}-IL-6 305
Ion pairs
dienelactone hydrolase Cys-His-Asp triad 575
hormone–receptor complex, enzyme–substrate complex, charge reversal mutagenesis 455
IRF-2
mouse 195
Isomerization
aldose–ketose, mechanism 479

Jun
structure 557

Ketose
aldose isomerization 479

***lac* operon**
expression in *Lactococcus lactis* 201
***lac*G gene**
Staphylococcus aureas, mutagenesis 913
LacR repressor
in *Lactococcus lactis* 201
β-Lactamase
structure, kinetics, *Bacillus licheniformis* E166A mutant 11
Lactococcus lactis
cell-envelope proteinase, homology modelling with serine proteinase 927
LacR repressor in 201
Leucine
zipper proteins, Jun, GCN4 557
Ligand placement
algorithm, molecular modelling 723
Lignin peroxidase LIII
Phlebia radiata, model 177
Linker design
single-chain Fv, proteolytic stability, aggregation 989
Lipoprotein
fusion protein with single-chain antibody, expression in *Escherichia coli* 449
Logic programming
secondary structure in all-helical proteins 831
Lymphocyte antigen
site-directed mutagenesis of CD2 T lymphocyte antigen 965
Lysozyme
human, calcium binding site thermostability 643
protein stabilization 183

M_2 protein
molecular model 65

Metal binding
metallothionein I_A expression in transgenic tobacco plants 755
Metallothionein I_A
α-domain, expression in transgenic tobacco plants 755
Metropolis Monte Carlo scheme
protein design 793
MODIP
disulphide bond computer modelling in α-conotoxin GI, endothelin I 873
Molecular astrology
Myb DNA binding domain, commentary 129
Molecular docking
ligand placement algorithm, molecular modelling 723
Molecular dynamics
human 5-HT_{1a} receptor modelling 691
subtilisin BPN′ structure prediction 397
turn prediction computer modelling, AMBER XPLOR 837
Molecular modelling
anti-phosphotyrosine antibody, high affinity interactions 661
ligand placement algorithm 723
Monte Carlo simulation
contact maps, globular proteins, regularities in interaction patterns 801
protein folding 605
Multiple alignments
secondary structure prediction 849
Multiple sequence data
protein folding, idealized folds 593
Mutagenesis
cassette mutagenesis, *Aspergillus awamori* glucoamylase, catalytic and pH properties 939
charge reversal 455
Escherichia coli RNA phage *fr* coat protein analysis 883
novel strategy eliminating wild type background 409
second-site mutation, human epidermal growth factor 651

Neutral protease
Bacillus subtilis, introduction of disulphide bonds 521

Overproduction
bovine β-casein expression in *Escherichia coli* 763
Oxaloacetate
decarboxylation facilitation by zinc ions bound to His4/acetate dehydrogenase 907

Pancreatic ribonuclease A
bovine, ribonuclease A B2 subsite site-directed mutagenesis 901
Papain precursor
expression of, in *Saccharomyces cerevisiae* 213
Peptidomimetic inhibitor complex
α-thrombin, crystal structure 471
pH activity profile
β-1,4-endoglucanase from *Bacillus subtilis* 921
Phlebia radiata
lignin peroxidase LIII model 177
6-Phospho-β-galactosidases
Gram-positive bacteria 913
6-Phospho-β-glucosidases
Gram-negative bacteria 913
Phosphotransferase
phosphoenolpyruvate-dependent 417
Photosynthetic bacteria
antenna complexes, membrane proteins transmembrane helices 629
Plasminogen activator
tissue-type, fibrin specific 529
Platelet receptor $\alpha_{IIb}\beta_3$
fibrinogen platelet receptor $\alpha_{IIb}\beta_3$ 745
Presentation scaffold
fibrinogen binding to platelet receptor $\alpha_{IIb}\beta_3$ 745
Protein design
Metropolis Monte Carlo scheme 793
Protein folding
dynamic programming algorithm 373
Escherichia coli triosephosphate isomerase ($\beta\alpha$)-unit 8 modification 893
fuzzy-end elimination theorem side chain placement algorithm 717
global folding, distance constraints 605
idealized folds, multiple sequence data 593

interleukin-1β structural determinants 711
mechanism 1
Monte Carlo method, distance constraints 605
protein fold families 485
Rhizomucor miehei lipase activation 855
β-sandwich protein 461
secondary structure, comparison of algorithms 377
structural motifs 279
thermodynamic and thermal stability, interleukin-1β protein folding 733
Protein sequence
ALSCRIPT sequence alignment 37
contact frequency in 267
designing discriminating fingerprints 167
Fusarium oxysporum trypsin 341
homology modelling, bovine pancreatic β-trypsin exons 615
homology modelling, secondary structure prediction 261
homology modelling interleukin-1β, hydrophobic profiles 865
Metropolis Monte Carlo scheme 793
mix 'n' match secondary structure prediction 683
multiple sequence data, computer modelling idealized folds 593
recursive ensemble mutagenesis 327
SBASE domain library 391
secondary structure prediction, multiple alignments 849
Protein stabilization
lysozyme 183
3C proteinase
coxsackievirus B3 serine proteinase 189
Proteolytic stability
Pseudomonas glumae lipase 637
single-chain Fv, linker design, aggregation 989
Pseudoenergy profiles
homology modelling structure prediction 811
***Pseudomonas* exotoxin A**
chimeric toxins with epidermal growth factor 433
Pseudomonas glumae
lipase, increasing proteolytic stability 637
***ptsH* gene**
site-directed mutagenesis 417
α_1-Purothionin
molecular dynamics turn prediction, AMBER XPLOR 837
Pyruvate dehydrogenase complex
Escherichia coli 101

RANMOD
disulphide bond computer modelling in α-conotoxin GI, endothelin I 873
Receptor modelling
molecular dynamics, 5-HT_{1a} 691
Receptor-binding
human epidermal growth factor, mutagenesis 651
Recursive ensemble mutagenesis
protein sequence 327
Rhizomucor miehei
lipase activation, computer modelling 855
Ribonuclease A
B2 subsite site-directed mutagenesis 901
Ribonuclease HI
Escherichia coli, site-directed mutagenesis 85
Ricin A-chain
Escherichia coli expression of 425
RNA phage *fr*
coat protein, *Escherichia coli*, mutagenesis analysis 883
RNase T1
Escherichia coli, site-directed mutagenesis, catalytic activity 739

Saccharomyces cerevisiae
expression of papain precursor 213
β-Sandwich protein
protein folding 461
SBASE domain library
391
Second-site mutation
human epidermal growth factor receptor-binding 651
Secondary structure
assignment, comparison of algorithms 377
dynamic programming algorithm sequence alignment 373
prediction, homology modelling 261
prediction, mix 'n' match homology modelling 683
prediction, protein sequence multiple alignments 849
prediction using logic programming in all-helical proteins 831
protein fold families 485
protein folding, idealized folds 593
protein folding, Monte Carlo method 605
UV circular dichroism 383
Secondary structure prediction
Sequence alignment
ALSCRIPT 37
designing discriminating fingerprints 167
dynamic programming algorithm, secondary structure 373
secondary structure assignment, comparison of algorithms 377
Serine protease
α-antichymotrypsin, homology modelling 701
Fusarium oxysporum trypsin 341
subtilisin BPN′ structure prediction 397
Serine proteinase
homology modelling with *Lactococcus lactis* cell-envelope proteinase 927
similarity to 3C proteinase models 189
Serpin
α-antichymotrypsin, homology modelling 701
β-Sheet
β-sandwich protein 461
Side chain placement
algorithm, fuzzy-end elimination theorem 717
Single-chain antibody
fusion protein with lipoprotein, expression in *Escherichia coli* 449
Single-chain Fv
linker design, proteolytic stability, aggregation 989
Site-directed mutagenesis
ptsH gene 417
yeast phosphoglycerate kinase 313
Solution conformation
trypsin carboxypeptidase peptide inhibitor, protein folding 675
Solution structure
Escherichia coli expression of cytochrome b_5, thermostability 953
SPKK
DNA-binding structural motifs 565
Staphylococcal protein A
interaction with human immunoglobulin G class 1 441
Staphylococcus aureas
*lac*G gene, mutagenesis 913
Staphylococcus carnosus
phosphoenolpyruvate-dependent phosphotransferase, site-directed mutagenesis 417
ptsH gene site-directed mutagenesis 417
Streptavidin binding
affinity peptide 109
***Streptomyces* subtilisin inhibitor**
protease interaction 297
Structural determinants
interleukin-1β protein folding 711
Structural motifs
antiparallel β-sheets 367
($\beta\alpha$)-barrel modification, *Escherichia coli* triosephosphate isomerase 893
calcium binding EF-hand peptide 585
computer vision based comparison of proteins 279
DNA-binding, SPKK 565
four-helix bundle, predetermined tertiary structure, anti-HIV vaccine 997
Greek key motif 233
helix−turn−helix module, DNA-binding 621
idealized folds 593
protein fold families 485
β-sandwich protein, β-barrel, β-sheet, Greek key 461
secondary structure assignment, comparison of algorithms 377
Structure−function analysis
human interleukin-1α 535
Structure prediction
pseudoenergy profiles, homology modelling 811
Substitution matrix
contact frequency in protein sequence 267
Substrate mobility
thiocamphor bound to cytochrome P-450_{cam} 359
Subtilisin BPN′
molecular dynamics structure prediction 397

T cell
crystallization of glycoprotein CD2 229
T cell epitopes
anti-HIV vaccine, predetermined tertiary structure 997
Tertiary structure
comparative modelling, automated procedure 501
four-helix bundle structural motif, anti-HIV vaccine 997
Thermostability
Bacillus subtilis neutral protease, introduction of disulphide bonds 521
Escherichia coli expression of cytochrome b_5, solution structure 953
Escherichia coli ribonuclease HI, mutants 85
free energy calculations 289
human lysozyme calcium binding site 643
thermodynamic and thermal stability, breakdown in relationship, interleukin-1β protein folding 733
Thiocamphor
substrate mobility bound to cytochrome P-450$_{cam}$ 359
α-Thrombin
peptidomimetic inhibitor complex, crystal structure 471
Thyroid transcription factor 1
homeodomain, homology modelling 513
Tobacco plants
transgenic, metallothionein I_A expression in 755
Transmembrane helices
photosynthetic bacteria antenna complexes 629
Transmembrane helix bundles
model 59
Triosephosphate isomerase
($\beta\alpha$)-unit 8, *Escherichia coli*, protein folding 893
α-Tropomyosin
molecular modelling analysis 51
β-Trypsin
bovine pancreatic exons, homology modelling 615
Trypsin
from *Fusarium oxysporum* 341
inhibitor, homology with carboxypeptidase A inhibitor 675
inhibitor, interleukin-1β structural determinants 711
Trypsin carboxypeptidase peptide inhibitor
protein folding, solution conformation 675
Turn prediction
α_1-purothionin, molecular dynamics computer modelling, AMBER XPLOR 837

($\beta\alpha$)-Unit 8
modification, *Escherichia coli* triosephosphate isomerase protein folding 893
UV circular dichroism
secondary structure 383

Winter flounder antifreeze protein
molecular dynamics simulation 19

XPLOR
molecular dynamics turn prediction, α_1-purothionin 837
Xylose isomerase
mechanism of hydride transfer 479

Yeast phosphoglycerate kinase
site-directed mutagenesis 313

Zinc ions
bound to His4/acetate dehydrogenase, oxaloacetate decarboxylation facilitation by 907
Zipper proteins
Jun, GCN4, structure 557
